

CS and AIML Fundamentals - Questions and Answers

Q1. What is Computer Science?

Answer: Computer Science is the study of computers, algorithms, software, data, and computational systems.

Q2. What is Artificial Intelligence?

Answer: AI is the field of creating systems that can perform tasks that normally require human intelligence.

Q3. What is Machine Learning?

Answer: Machine Learning is a subset of AI where systems learn patterns from data to make predictions or decisions.

Q4. What is Deep Learning?

Answer: Deep Learning is a subset of ML that uses neural networks with many layers.

Q5. What is an algorithm?

Answer: An algorithm is a step-by-step procedure to solve a problem.

Q6. What is a data structure?

Answer: A data structure is a way to organize and store data efficiently.

Q7. What is Python used for in AIML?

Answer: Python is used for data analysis, machine learning, automation, and AI development.

Q8. What is supervised learning?

Answer: Supervised learning trains a model using labeled data.

Q9. What is unsupervised learning?

Answer: Unsupervised learning finds patterns in unlabeled data.

Q10. What is a neural network?

Answer: A neural network is a computational model inspired by the human brain.

Q11. What is a dataset?

Answer: A dataset is a collection of data used for training and testing models.

Q12. What is overfitting?

Answer: Overfitting happens when a model memorizes training data and performs poorly on new data.

Q13. What is a database?

Answer: A database is an organized collection of data.

Q14. What is SQL?

Answer: SQL is a language used to manage and query databases.

Q15. What is a vector database?

Answer: A vector database stores embeddings for similarity search in AI applications.
